

SaaS Management Platform for Office 365 and other SaaS

*Committed to helping enterprise organizations
maximize their SaaS investments*

What makes CoreView different?

CoreView extends
the Microsoft native
capabilities to:

Protect M365
environments

Effectively manage
M365 and SaaS

Optimize SaaS
investments

Gold
Microsoft Partner

“Our organization is completely distributed around the globe. We had to have a solution like CoreView to partition our tenant so we could delegate admin rights to remote IT groups in 60 different countries.”

ISMAEL CARLO
Global IT Services Manager, Fugro

It's our mission to reduce the risks of deploying M365 and SaaS applications, while automating day-to-day management, and optimizing your SaaS investment. We revolutionize the administrative experience with info at your fingertips.

SaaS Management Platform

As digital transformation and SaaS adoption accelerate, organizations need to protect their data, effectively manage the devices and users that access it, and enable IT to optimize M365 and SaaS investments. CoreView augments and extends the native Microsoft Admin Center to revolutionize the admin experience by doing what is not possible with native tools.

CoreView provides:

- Virtual tenants for splitting the Admin span of control for segregation of duties, and dispersed IT groups
- RBAC (Role-based Access Control) for granular control of administrative tasks
- Enforcement of your security policies, including guidelines from CIS and NIST
- Retention of event data –30 billion events retained last year across all our customers – allowing for deep forensics so that you know exactly what happened during any security incidents

- Automated workflows to eliminate the tedious and error prone tasks, including provisioning and deprovisioning which could leave your data and systems vulnerable
- Discovery of SaaS applications being used, potentially wasting money and creating security risks
- Actionable analytics so that you have the info you need at your fingertips, all in a single console for immediate use
- License management and optimization, so you can allocate licenses and license costs, right-size licenses according to user usage, and return or deactivate unused and unassigned licenses
- Adoption of desired products, with internal email campaigns and learning videos
- Document scanning and tagging for GDPR and CCPA compliance

CoreView Meets Your O365 and SaaS Needs

CoreSuite

Office 365 Protection, Management, & Optimization

CoreTeamsAnalytics

Usage and Trending Reports for Teams

CoreAdmin

Office 365 License Management & Reporting
